JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for bulk organic film 273
– for laser Doppler velocimetry 429
– for melt growth
– – by Czochralski method
– – – of gallium antimonide 159
– for microsphere growth
– – of potassium niobate 191
– for surface tension determination 413
– for miscellaneous purposes
– – viscosity of molten potassium niobate 81

Cadmium
– telluride 227
Computer simulation
– of convection 308
– of crystallization of finite polymer chains 284
– of flow patterns 447
– of melt flow 362
– of solid distribution 308, 463
– of solid melt interface 147
Convection 323, 351, 362, 447, 463

Dendritic growth
– of germanium iodide 245
Device characterization
– heterojunction 61, 70
– quantum wells 210
Diamond 387
Diffusional control
– of composition 129, 137
Dissolution
– of calcium carbonate 268
– of organic solvents 273

Epitaxy, see Thin film growth
Etching
– chemical 156, 387
Eutectic growth
– of sodium nitrate, 18% barium nitrate 438

Gallium
– antimonide 8, 15, 156, 159
– arsenide 1, 156, 345, 482
– phosphide 210
Germanium
– iodide 245
– silicon 381

Heat flow control 129, 323, 351, 447
Heterojunction, see Device characterization
Hydrodynamics, see Convection

Indium
– gallium arsenide 215
– gallium phosphide 210

Kinetics
– of dissolution 268
– of growth 90, 106, 116, 215, 273, 335, 341
– of impurity incorporation 215

Lasers, crystals for
– nonlinear optics 273
Lead
– telluride 70, 402
– tungstate 163
Lysozyme 293, 299

Melt growth technique
– by Bridgman–Stockbarger method 129
– – of lead telluride 402
– – of silicon germanium mixed crystals 381
– – of sodium nitrate 195
– – theory of gravity perturbation 471
– by Czochralski method
– – of gallium antimonide 159
– – of germanium 351
– – of lead tungstate 163
– – of silicon 362, 362, 372
– – theory of convection 372
– by floating zone method
– – of chromium doped magnesium silicate 250
– – of sodium barium nitrate 438
– – of sodium nitrate 447
– – of zirconium borane 319
– by self propagating high temperature synthesis
– – of zinc sulphate 166
– by uniaxial solidification 137, 147
– – of lead tin telluride 75
– – theory of convection and radiation heat transfer 455

Mercury
– cadmium telluride 19, 227
Microgravity, growth under 129
– of germanium 351
– of lead tin telluride 75
– of proteins 308
– theory
– – of composition profiles 471
– – of fluid dynamics 308
– – of mass transfer 323
Morphological stability
– of dilute binary alloy 147

Nickel
– silicate 57
Nucleation
– of calcium hydroxy orthophosphate 98
– of crystalline silicon 341
– of electrodeposits 421
Numbers
– Grashof 129, 351, 463, 471
– Marangoni 351
– Peclet 129, 351, 429, 471
– Prandtl 351
– Rayleigh 129, 351, 429
– Reynolds 463
– Schmidt 471

Phase diagram
– of germanium iodide 245
– of lysozyme 293
– of strontium lead gallium hexachromate 179
– of zinc selenide 31
Precursor
– for calcium hydroxy orthophosphate 98

Quantum wells, see Device characterization

Silicon 37, 61, 172, 341, 362, 362, 372
– carbide 233
– germanium 61
Solid growth technique
– by recrystallization
– – of amorphous silicon 341
Solution growth technique
– by electrodeposition
– – of nickel 421
– – of copper 421
– – of iron 421
– – of zinc 421
– by flux method
– – of barium borate 408
– – of lysozyme 299
– – of strontium lead gallium hexachromate 179
– – theory of growth mechanism 42
– by gel method
– – of 4-dimethylaminobenzaldehyde-4-nitrophenylhydrazone 273
– – of 2-amino-5-nitropyridium dihydrogen phosphate 90
– by high temperature alkaline solution
– – of hydroxyapatite 124
– – theory of nucleation 116
– by low temperature method
– – of fluorapatite 116
– – of 4-dimethylaminobenzaldehyde-4-nitrophenylhydrazone 273
– – of hydroxyapatite 106
– by solvent evaporation
– – of zinc gallium oxide 183
– – theory of facet formation 335
Superconductivity materials, high T_c
– bulk
– – of YBCO 42, 198
Surface energy, determination
– of barium borate melt 413
– of microsphere 191
Surface morphology
– of mercury cadmium telluride 19
– of YBCO 42

Thin film growth, epitaxy
– by gas source molecular beam epitaxy
– – of gallium phosphide 210
– – of indium gallium phosphide 210
– by liquid phase epitaxy
– – of gallium arsenide 482
– – of mercury cadmium telluride 19
– by molecular beam epitaxy
– – of aluminum antimonide 8
– – of aluminum arsenide antimonide 156
– – of cobalt silicate 61
– – of gallium antimonide 8, 156
– – of gallium arsenide 15, 156, 345
– – of silicon 61
– – of silicon germanium 61
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 387
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 1
– – – of cadmium telluride 227
– – – of gallium arsenide 1
– – – of gallium indium phosphide 215, 222
– – – of mercury cadmium telluride 227
– – – of zinc selenide 25
– – – of zinc telluride 203, 227

Vapor growth technique
– by chemical transport
– – of indium oxide 258
– – of tin oxide 258
– by evaporation and condensation
– – of lead telluride 70
– – of silicon carbide 233
– – of zinc selenide 169
– – theory of heat and mass transfer 323

– by laser fabrication
– – of nickel chromium silicide 57
– by pulsed laser deposition
– – of lithium niobate/lithium tantalate waveguides 187
– by vapor reaction
– – of germanium iodide 245
Vapor–liquid–solid growth
– of silicon on patterned silicon on insulator 37
Zinc
– selenide 25, 31, 169
– sulphide 166
– telluride 203
Zirconium
– borane 319
